

Wind-BLOCKER

Universal holder(s) for 3-8-litre planter containers

The **Wind-BLOCKER** offers an optimal stability for woody plants being susceptible to winds both in production and in sale area. Differently long lamellas can take up containers having diameters from 10 to approx. 25 cm and hold them force-fit. From 3-litre containers for conifers, hedge plants 40/60/80 and bushes 60/100 to the 8-litre container for conifers and small solitary bushes. Grooves and tongues included in every **Wind-BLOCKER** permit to arrange the containers in sets of three and four.

Application:

- Firmly press the containers into the grip lamellas
- Catch hold of the pot's rim when taking out the container

Advantages:

- Reduction of costs since the plants do not have to be constantly put up again
- No quality loss caused by broken twigs and branches
- Applied depot fertilisers and mulch materials will not fall down anymore
- One wind protection for several container sizes, this means there will be no costly and time-consuming sorting and storing of different holder sizes
- Different colours permit an assignment to several groups of woody plants
- extraordinary wind resistance through positioning in sets

Dimensions:

- Upper diameter (opening for containers) up to 23.5 cm
- Height 15 cm / Lower diameter (footprint) 41 cm
